

PROFESSIONAL 'BOX & BLOCK' TEST KIT

Introduced in 1957, the 'Box and Block Test' was one of the first clinical assessments of hand-grip function, measuring unilateral gross manual dexterity in children with cerebral palsy. Higher scores are indicative of higher levels of dexterity.

A relatively quick, simple and reliable test, it was subsequently found to be applicable to a wide range of patients of all ages presenting with any number of neurological disorders.

Precisely manufactured to original specifications, Neuroquip's Professional 'Box & Block Test' Kit is as suitable for use in research as it is an outcome measure to assess the effectiveness of treatment over a period of time.

Each Neuroquip Professional 'Box & Block Test' Kit contains:

- **STRONG PLASTIC CARRY-CASE**
- **WOODEN TESTING BOX**
- **WOODEN TESTING BOX DIVIDER**
- **150x WOODEN BLOCKS (+ 2x spare blocks)**
- **ZIPPED CANVAS CASE FOR STORING BLOCKS**
- **COUNTDOWN TIMER**
- **USB MEMORY STICK WITH TEST INSTRUCTIONS, SCORE SHEET AND RESEARCH DOCUMENT.**
